Features of the Micro Slider RCL-SA

Space Saving, Ultra Compact Linear

The 20mm width facilitates installation in a narrow space (SA1L type). The built-in motor coil eliminates the need for a cable track, so there is no cable disconnection.

High-Speed Operation

The linear motor method, which has no rotational speed reduction mechanism, makes the slider smaller in size and able to operate at higher speed.

Smooth, Quiet Movement

The sine wave drive of the three-phase coil enables the slider movement without cogging. Moreover, it virtually has no magnetism leak.

Multi-Point Positioning Achieved with a Built-in Linear Encoder

An integrated linear encoder allows positioning at up to 512 points in combination with a small, low-cost ACON controller.
